Hi,

Please do try these troubleshooting steps that might help.

- Uninstall the graphics card driver from Device Manager and in Programs and Features as well since it should have something related to NVIDIA in there as well.
- Once uninstalled download and install the latest driver from NVIDIA support site.
- Here's the link: [nvidia.com/download/index.aspx](https://www.nvidia.com/download/index.aspx)
- Use the Auto Detect feature so they could give you the latest and accurate driver for your graphics card.
- Lastly reboot it once the latest driver has been installed.
