

Bluescreen crash with Inspiron 15R

Posted by admin - 26 Jun 2012 08:15

Hi there, I recently bought a Dell Inspiron 15R special edition. It was running a little strangely, locking up and the occasional random program crashes, so i decided to format and reinstall windows. I installed all drivers in the recommended order, but now when I try to play full screen video games I get a bluescreen crash (BCCode 116). I have tried reinstalling the graphics drivers, but nothing seems to be working. Any advice?
