

## wireless mouse short range problem

Posted by admin - 30 Jun 2012 17:55

---

Hello,

I've recently purchased the logitech M235 wireless mouse.

When I connect it to my new Dell Inspiron N5110 laptop, the mouse works only up to 35 cm afar from the reciever.

On the other hand, when i connect it to other laptops (of other brands) it works perfectly from long distances.

Does anybody knows what can interfere the mouse in my dell laptop?

and is there anyway to fix it?

Thanks.
