

Vostro keyboard

Posted by admin - 30 Jun 2012 17:56

Hi There,

Ok.. I've a Dell Vostro 1510 in which I had to replace the motherboard and format the HDD. The problem is the letters

on the bottom row of the keyboard are mis mapped one to the left. Hit the B and you get a V etc. The keyboard is of the

type where there is no backslash between the left shift and the Z. I've updated the BIOS, chipset drivers anything else

I could think of. It's not a Vista issue 'cos I've booted off a DOS disk and the problem remains.

Can any one help?
